

Global market regulations now require all OTC Derivatives trades to be reported in real-time to Swap Data Repositories (SDR). You can now aggregate all the trade data from SDRs globally with the easy-to-use GUI and/or API in **SDR View**.

# 2014

## Features

**Markets reported:**  
Interest Rate Swaps  
Cross Currency Swaps  
Swaptions

**Filters**  
Cleared vs UnCleared  
On vs Off SEF

**Daily**  
Volumes and Prices  
Curves

**Intra-day**  
Latest Trades  
Indicative ICAP curves

**Technology**  
SaaS and Cloud  
Easy to use GUI  
Data-feed API

### What is the value of this data?

For the **first time**, everyone has access to data on what has traded, at what price and what size.

Previously **only** Swap Dealers and Inter-Dealer Brokers had access to such detailed trade flow.

Now any firm that needs to trade can **use this information** to understand for a specific currency and product, where market prices are trading, what liquidity exists; both today and historically.

This **transparency** is analogous to that which exists in Futures or TRACE for the US Corporate market.

It reflects the political and **economic trend** for all markets, in goods or services, to provide transparency on their transactions.

### Why SDR View?

Know **what trades** have taken place today, in what size and what price.

See **pre-trade price transparency** as represented by ICAP's indicative swap curves before initiating a trade.

Compare today's activity to yesterday, this week, last week or **any period** in the last month.

Analyze **volume traded** across currencies and asset types in real-time.

Check the **last traded**, average, high and low prices as well as the ICAP hourly indicative curve before taking a position.

You need to be one step ahead of your competition in **knowing** what is happening in your market right at this moment.
